

CLAIMS

1-138 (cancelled)

139. (New) A method for generating an image for display; said method comprising the steps of: selecting a set of part images from among a plurality of part images; specifying a position, to be occupied in the display, for each part image in said set of part images; specifying properties for each part image in said set of part images; and displaying each part image according to specifications.

140. (New) A method, according to claim 139, wherein said step of specifying properties of each part image in said set of part images comprises the step of specifying at least one of: a color of each part image in said set of part images; a texture of each part image in said set of part images; a cladding to be applied to each part image in said set of part images; an orientation of each part image in said set of part images; a size of each part image in said set of part images; a transparency of each part image in said set of part images; a direction of movement of each part image in said set of part images; a type of movement of each part image in said set of part images; a speed of movement of each part image in said set of part images; a time to be displayed for each part image in said set of part images; times to be displayed for each part image in said set of part images; and a viewpoint.

141. (New) A method, according to claim 139 or claim 140, comprising the step of providing, in the form of a text message, at least one of: the selection of the set of part images from among a plurality of part images; the specification of the position to be occupied in the display; and the specification of the properties for each part image in said set of part images.

142. (New) A method, according to claim 141, comprising the step of compacting codes used to represent the selections.

143. (New) A method, according to claim 139 or claim 140, comprising the step of receiving the specifications as an appendage to a text message.

144. (New) A method, according to claim 139 or claim 140, comprising the step of obtaining said set of part images from a server in a network.

145. (New) A method, according to claim 141, comprising the step of obtaining said set of part images from a server in a network.

146. (New) A method, according to claim 144, wherein said network comprises a mobile telephone network.

147. (New) A method, according to claim 139 or claim 140, comprising the step of displaying the image on at least one of: a computer; a personal digital assistant; and a mobile telephone.

148. (New) A method, according to claim 141, comprising the step of displaying the image the image on at least one of: a computer; a personal digital assistant; and a mobile telephone.

149. (New) A method for transmitting an image, said method comprising the steps of: sending a signal to specify a set of part images from among a plurality of part images; sending a signal to specify a position, to be occupied in a display, for each part image in said set of part images; and sending a signal to specify properties for each part image in said set of part images.

150. (New) A method, according to claim 149, wherein the step of sending a specification of the properties of each part image in said set of part images comprises the step of sending a specification of at least one of: a color of each part image in said set of part images; a texture of each part image in said set of part images; a cladding to be applied to each part image in said set of part images; an orientation of each part image in said set of part images; a size of each part image in said set of part images; a transparency of each part image in said set of part images; a direction of movement of each part image in said set of part images; a type of movement of each part image in said set of part images;; a speed of movement of each part image in said set of part images; a time to be displayed for each part image in said set of part images; times to be displayed for each part image in said set of part images; and a specification of a viewpoint.

151. (New) A method, according to claims 149 or 150, comprising the step of sending, in the form of a text message, at least one of: the specification of a set of part images from among a plurality of part images; the specification of a position, to be occupied in the display; and the specification of the properties for each part image in said set of part images.

152. (New) A method, according to claim 151, comprising the step of sending said specification as an appendage to a text message.

153. (New) A method, according to claims 139 or claim 140, comprising the step of obtaining said set of part images from a server in a network.

154. (New) A method, according to claim 152, wherein said network comprises a mobile telephone network.

155. (New) A method, according to claims 139 or 140, comprising the step of displaying said image on at least one of: a computer; a personal digital assistant; and a mobile telephone.

156. (New) A method, according to claim 141, comprising the step of displaying said image on at least one of: a computer; a personal digital assistant; and a mobile telephone.

157. (New) A method for receiving and generating an image, said method comprising the steps of: receiving a signal to specify a set of part images from among a plurality of part images; receiving a signal to specify a position, to be occupied in the display, for each part image in said set of part images; receiving a signal to specify properties for each part image in said set of part images; and responding to the signals to generate and display the image specified.

158. (New) A method, according to claim 157, wherein the step of receiving a specification of the properties of each part image in said set of part images comprises the step of receiving a specification of at least one of: a colour of each part image in said set of part images; a texture of each part image in said set of part images; a cladding to be applied to each part image in said set of part images; an orientation of each part image in said set of part images; a size of each part image in said set of part images; a transparency of each

part image in said set of part images; a direction of movement of each part image in said set of part images; a type of movement of each part image in said set of part images; a speed of movement of each part image in said set of part images; a time to be displayed for each part image in said set of part images; a times to be displayed for each part image in said set of part images; and a specification of a viewpoint.

159. (New) A method, according to claim 157 or 158, comprising the step of receiving, in the form of a text message, at least one of: the selection of a set of part images from among a plurality of part images; the specification of a position, to be occupied in the display; and the specification of the properties for each part image in said set of part images.

160. (New) A method, according to claim 159, comprising the step of receiving the specifications as compacted codes.

161. (New) A method, according to claim 157 or claim 158, comprising the step of obtaining said set of part images from a server in a network.

162. (New) A method, according to claim 161, wherein said network comprises a mobile telephone network.

163. (New) A method, according to claim 157 or 158, comprising the step of displaying the image on at least one of: a computer; a personal digital assistant; and a mobile telephone.

164. (New) A method, according to claim 160, comprising the step of displaying the image on at least one of: a computer; a personal digital assistant; and a mobile telephone.

165. (New) A method, according to claims 157 or claim 158, comprising the step of receiving the specifications as an appendage to a text message.

166. (New) An apparatus for generating an image for display; said apparatus comprising: means for selecting a set of part images from among a plurality of part images; means for specifying a position, to be occupied in the display, for each part image in said set of part images; means for specifying properties for each part image in said set of part images; and means for displaying each part image according to specifications.

167.(New) An apparatus, according to claim 166, wherein said means for specifying properties of each part image in said set of part images comprises means for specifying at least one of: a colour of each part image in said set of part images; a texture of each part image in said set of part images; a cladding to be applied to each part image in said set of part images; an orientation of each part image in said set of part images; a size of each part image in said set of part images; a transparency of each part image in said set of part images; a direction of movement of each part image in said set of part images; a type of movement of each part image in said set of part images; a speed of movement of each part image in said set of part images; a time to be displayed for each part image in said set of part images; a times to be displayed for each part image in said set of part images: and a viewpoint.

168. (New) An apparatus, according to claim 166 or 167, comprising means for providing, in the form of a text message, at least one of: the selection of a set of part images from among a plurality of part images; the specification of a position, to be occupied in the display; and the specification of the properties for each part image in said set of part images.

169. (New) An apparatus, according to claim 168, comprising means for employing compacting codes to represent said selections.

170. (New) An apparatus, according to claim 166 or 167, comprising means for obtaining said set of part images from a server in a network.

171. (New) An apparatus, according to claim 170, wherein said network comprises a mobile telephone network.

172. (New) An apparatus, according to claim 166 or 167, comprising at least one of a computer; a personal digital assistant; and a mobile telephone for displaying said image.

173. (New) An apparatus, according to claim 168, comprising at least one of of a computer; a personal digital assistant; and a mobile telephone for displaying said image.

174. (New) An apparatus, according to claim 166 or 167, comprising means for receiving said specification as an appendage to a text message.

175. (New) An apparatus for transmitting an image, said apparatus comprising: means for sending a signal to specify a set of part images from among a plurality of part images; means for sending a signal to specify a position, to be occupied in a display, for each part image in said set of part images; and means for sending a signal to specify properties for each part image in said set of part images.

176. (New) An apparatus, according to claim 175, wherein said means for sending a signal to specify properties of each part image in said set of part images comprises means for sending a signal to specify at least one of: a color of each part image in said set of part images; a texture of each part image in said set of part images; a cladding to be applied to each part image in said set of part images; an orientation of each part image in said set of part images; a size of each part image in said set of part images; a transparency of each part image in said set of part images; a direction of movement of each part image in said set of part images; a type of movement of each part image in said set of part images; a speed of movement of each part image in said set of part images; a time to be displayed for each part image in said set of part images; a times to be displayed for each part image in said set of part images; and a viewpoint.

177. (New) An apparatus, according to claim 175 or 176, comprising means to provide a text message for selecting at least one of: the selection of a set of part images from among a plurality of part images; the specification of a position, to be occupied in the display; and the specification of properties for each part image in said set of part images.

178. (New) An apparatus, according to claim 177, comprising means for providing said signals as compacting codes.

179. (New) An apparatus, according to claim 175 or 176, comprising means for obtaining said set of part images from a server in a network.

180. (New) An apparatus, according to claim 179, wherein said network comprises a mobile telephone network.

181. (New) An apparatus, according to claims 175 or 176, comprising at least one of: a computer; a personal digital assistant; and a mobile telephone for displaying the image.

182. (New) An apparatus, according to claim 177, comprising at least one of: a computer; a personal digital assistant; and a mobile telephone for displaying the image.

183. (New) An apparatus, according to claim 175 or 176, comprising means for receiving signals, representative of specifications, as an appendage to a text message.

184. (New) An apparatus for receiving and creating an image, said apparatus comprising: means for receiving a signal to specify a set of part images from among a plurality of part images; means for receiving a signal for specifying a position, to be occupied in the display, for each part image in said set of part images; means for receiving a signal to specify properties for each part image in said set of part images; and means, responsive to said signals, for generating and displaying a specified image.

185. (New) An apparatus, according to claim 184, wherein said means for receiving a signal to specify properties of each part image in said set of part images comprises means to receive a signal to specify at least one of: the color of each part image in said set of part images; a texture of each part image in said set of part images; a cladding to be applied to each part image in said set of part images; an orientation of each part image in said set of part images; a size of each part image in said set of part images; a transparency of each part image in said set of part images; a direction of movement of each part image in said set of part images; a type of movement of each part image in said set of part images; a speed of movement of each part image in said set of part images; a time to be displayed for each part image in said set of part images; a times to be displayed for each part image in said set of part images; and a viewpoint.

186. (New) An apparatus, according to claim 184 or 185, comprising means for receiving a text message for selecting at least one of: the selection of a set of part images from among a plurality of part images; the specification of a position, to be

occupied in the display; and the specification of properties for each part image in said set of part images.

187. (New) An apparatus, according to claim 186, comprising means for receiving signals to provide said specifications as compacted codes.

188. (New) An apparatus, according to claim 184 or 185, comprising means for obtaining said set of part images from a server in a network.

189. (New) An apparatus, according to claim 188, wherein said network comprises a mobile telephone network.

190. (New) An apparatus, according to claim 184 or claim 185, comprising at least one of: a computer; a personal digital assistant; and a mobile telephone for displaying the image.

191. (New) An apparatus, according to claim 186, comprising at least one of: a computer; a personal digital assistant; and a mobile telephone for displaying the image.
